

## 1. Write a blog on the difference between document and window objects ?

Document	Window
It represents any HTML document or web page that is loaded in the browser	It represents a browser window or frame that displays the contents of the webpage
It is loaded inside the window	It is the very first object that is loaded in the browser
It is the object of window property	It is the object of the browser
All the tags, elements with attributes in HTML are part of the document	Global objects, function and variable of JavaScript are members of the window object.
We can access the document from a window using the  Example - window.document	We can access the window from the window only.  Example- window.window
The document is part of BOM (Browser Object Model) and DOM (Document Object Model)	The window is part of BOM, not DOM
Properties of document objects such as title, body, cookies, etc can also be accessed by a window like this window.document.title	Properties of the window object cannot be accessed by the document object.
